B-1: Characteristics of Autism Spectrum Disorders in the Pre-K Setting – *Lisa Rogers*

While there is more widespread awareness of autism spectrum disorders, there are still many children that go undiagnosed until the ages of 3, 4, 5 or later. Research shows that early intervention during ages 2-5 is linked to measurably better outcomes in communication, social skills, and adaptive behavior. This session will help you know what to look for, how diagnosis works, and which interventions have real evidence behind them. We will also address the role of the pre-K teacher in having sensitive conversations once the team has gathered data to share. This partnership with families gives parents and caregivers the clearest possible path to meeting their child's needs.
